- If you received your first dose from Munson Healthcare, you will be able to receive your second dose at your scheduled time.
- **We are not scheduling any additional first dose clinics.**

Munson Healthcare Vaccine Update

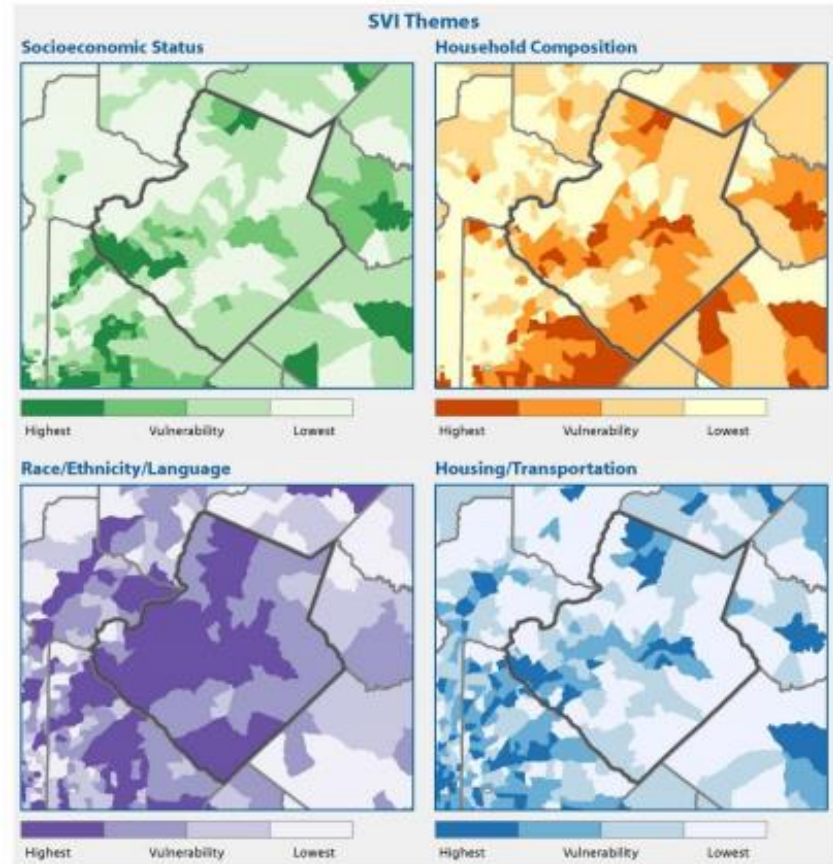

Munson Healthcare Vaccination Efforts

- As of February 22, MHC has administered **32,606** vaccines.
- **66%** of Munson Healthcare workers are now vaccinated.

Centers For Disease Control (CDC) Social Vulnerability Index

- A number of factors, including poverty, lack of access to transportation, and crowded housing may weaken a community's ability to prevent human suffering and financial loss in a disaster. These factors are known as social vulnerability.
- CDC SVI uses U.S. Census data to determine the social vulnerability of every census tract.

New virus variants that spread more easily could lead to a rapid rise in COVID-19 cases

NOW, more than ever, it is important to slow the spread

Viruses constantly change through mutation, and new variants of a virus are expected to occur over time.

The virus that causes COVID-19 is known to acquire, on average, one new mutation every two weeks.

Some variants may be more transmissible, or less responsive to vaccines - so it is important to avoid exposure.

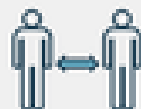

People traveling to Michigan and those who may have been exposed to the new variant should quarantine for 14 days (without the option to end quarantine early) and also get tested.

Wear a mask

A face shield may be worn over a mask for extra protection

Stay at least 6 feet apart

Avoid indoor gatherings

Get tested

Get vaccinated when available to you
